MOBILE PROGRAMMING

COURSE CODE

TTTM2213

INSTRUCTOR

DR. NELSON BUDIN SANA

ASSIGNMENT TITLE

PROJECT 1: COMPLETE SDG MOBILE APPLICATION

STUDENT

Matric Number	Name
A216430	NURUL HANNAH HADIRAH BINTI MOHD ZAKARIA

1.0 PROBLEM STATEMENT

Food waste is becoming a common problem in many households where people often buy or store food and then forget about it until it has already expired. Without an easy and consistent way to keep track of what is in the fridge or pantry, many usable food items are unintentionally thrown away.

This issue is important because food waste has a direct impact on both the environment and personal spending. When food is thrown away, it increases the amount of waste sent to landfills which contributes to greenhouse gas emissions that harm the environment. At the same time, it also means wasted money and resources such as water, energy and labour that were used to produce the food. Over time, this habit goes against the idea of sustainable consumption and responsible resource usage encouraged by global sustainability goals.

To help solve this problem, this project introduces a mobile application called FreshKeeper. The app allows users to record the food items they store including their expiry dates and track them in one simple place. It helps users stay aware of what needs to be used soon and reduces the chances of forgetting stored food. In addition, FreshKeeper can support users by showing items that are expiring soon and suggesting simple ways to use them such as recipes. This encourages better planning, reduces unnecessary waste and helps users develop more mindful eating habits in their daily lives. This project aligns with SDG Goal 12: Responsible Consumption and Production which aims to reduce food waste and promote sustainable resource usage.
